

Type	Field	
Long name	Continuing module	
Short name	CONTINUING	
Description	This field indicates where a module is being continued from a previous StudentCourseSession	
Applicable to	England Northern Ireland Scotland Wales	
Coverage	All ModuleInstances where applicable	
Valid entries and labels	Code	Label
	01	Continuing module
Notes	<p>ModuleInstances must not span StudentCourseSessions. Therefore, when a student studies a module that spans StudentCourseSessions, multiple ModuleInstances would be required to be returned.</p> <p>Where the ModuleInstance represents a student studying a module that started in a previous StudentCourseSession, this field must be returned to indicate this.</p> <p>Example</p> <p>A student studies a module which spans two StudentCourseSessions:</p>  <p>ModuleInstance 1 covers the period where the student is engaging with the module as part of StudentCourseSession 1. This ModuleInstance would have a ModuleInstance.MODULEUTCOME of 06 'Will continue Module in subsequent StudentCourseSession'.</p> <p>ModuleInstance 2 covers the period where the student is engaging with the module as part of StudentCourseSession 2. This Module Instance would have ModuleInstance.CONTINUING = 01.</p> <p>This ensures that it is recorded that the module is spanning StudentCourseSessions and so prevents double counting of information such as fees.</p>	
Reason required	To record where modules span StudentCourseSessions and prevent double counting.	
Part of	ModuleInstance
